Blinkit Sales Performance Analysis

Report Outline

- Introduction
- Business Requirements
- Analysis Framework
- Dashboard Presentation
- Key Findings
- Conclusion & Recommendations

Introduction

Blink Commerce Private Limited, doing business as **Blinkit** (formerly **Grofers**), is an Indian quick-commerce company owned by Eternal Limited. It was founded in December 2013 and is based in Gurgaon. Customers of the company use a mobile application to order groceries and essentials online, which are sourced from the company's dark stores and delivered in 10 minutes. Blinkit operates in 153 cities in India as of March 2025.

Business Requirements

The objective of this project is to analyze Blinkit's sales data to evaluate its overall sales performance, understand customer satisfaction patterns, and assess the contributions of products and outlets. The analysis aims to identify meaningful trends and relationships within the data that can support data-driven business decisions and performance optimization.:

Key Analytical Metrics Considered:

- Total Sales: Measures overall revenue contribution across products and outlets.
- Average Sales: Helps assess typical sales performance per item.
- Number of Items: Indicates product distribution and assortment breadth.
- Average Rating: Reflects customer satisfaction and product acceptance.

From Data to Insights: Analytical Framework

To ensure reliable and meaningful insights, the analysis followed a structured approach that moved from data validation to performance interpretation across multiple dimensions, using a combination of spreadsheet analysis, statistical exploration, and interactive dashboards.

Data Readiness:

Ensured data consistency by reviewing missing values and standardizing item and outlet attributes.

Understanding Overall Patterns:

Examined sales and rating distributions to capture overall performance behavior.

3

Exploring Key Relationships:

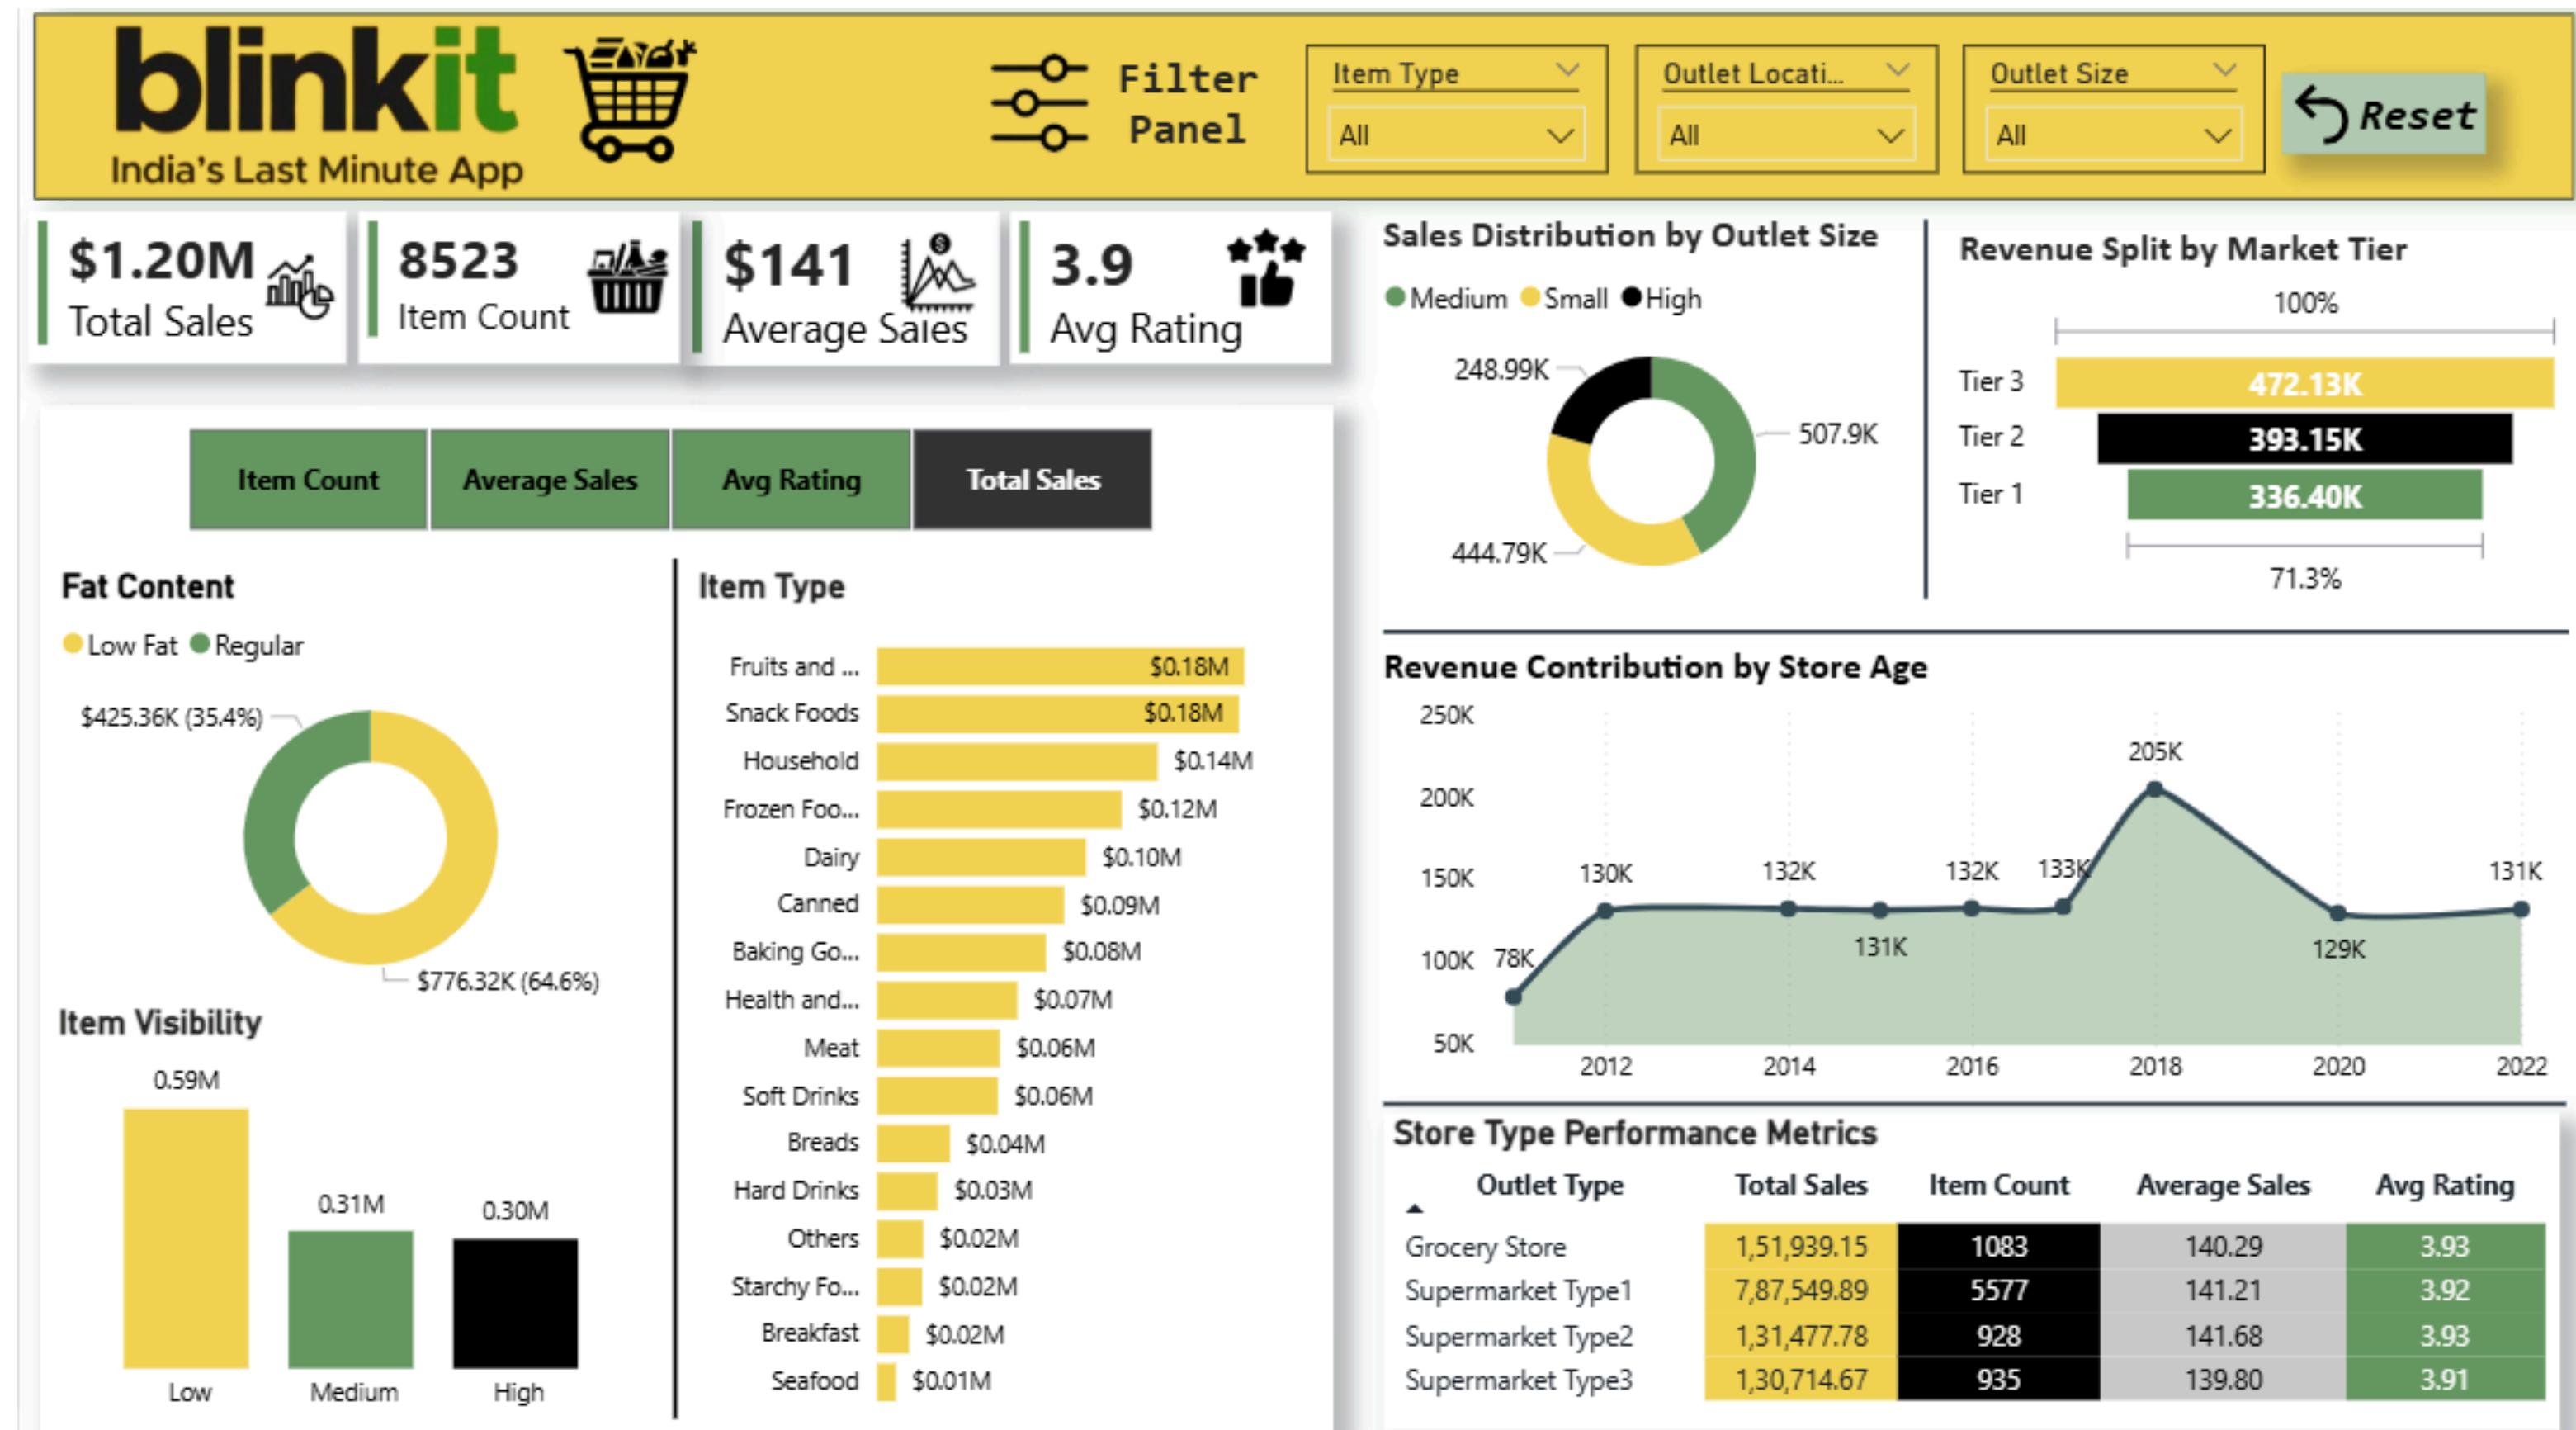

Applied statistical techniques to examine relationships between sales, visibility, ratings, and item characteristics.

Comparative Performance Analysis:

Leveraged interactive dashboards to compare sales performance across product categories, outlet types, sizes, and locations.

DASHBOARD

Key Findings

6

With
\$0.18M
Fruits & Vegetables
Is The Top Selling
Item Type

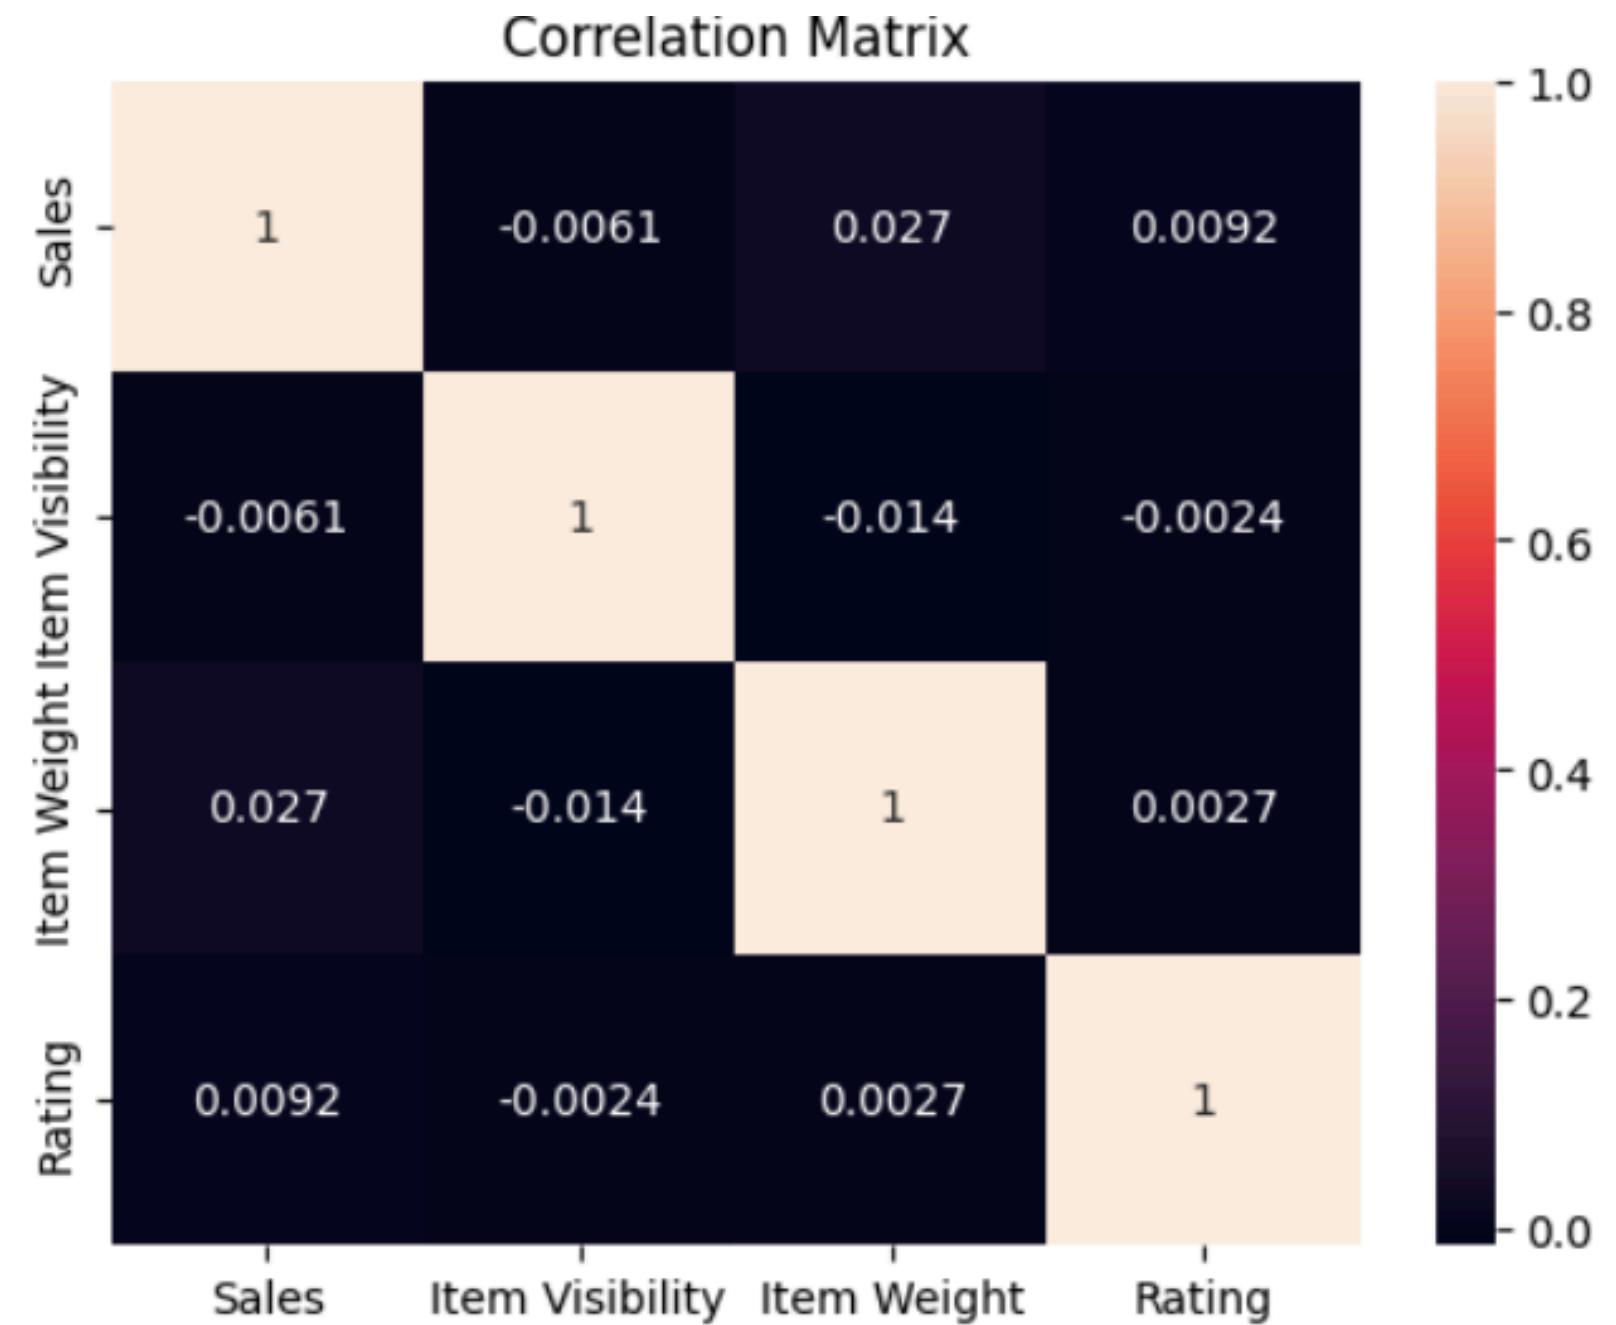

With Total Sales of
\$776.32K
Low Fat Content Is More
Preferred Than Regular

- Total Sales: \$1.20M
- Average Sales Per Item: \$141
- No of Items: 8523
- Average Rating: 3.9 out of 5

Tier 3 Locations Have The
Highest Revenue with the
contribution of:

\$472.13K

Low-Visibility
Products Accounts
for ~
45%
of Total Sales

Sales show **no meaningful correlation** with item visibility.

Customer ratings have **minimal impact** on sales performance.

Item weight has a **negligible influence** on sales value.

Sales are driven more by **outlet and category factors** than product attributes.

Conclusion & Recommendations

Conclusion:

- Sales are **highest in Tier-3 locations**, making them the strongest revenue contributors.
- **Fruits & Vegetables and Snack Foods** lead overall category-wise sales performance.
- **Medium-sized outlets** generate the highest total sales, indicating an optimal outlet format.
- Outlets established around **2017–2018** show peak sales performance.
- Sales have **weak correlation** with item visibility, weight, and customer ratings.

Recommendations:

- Focus expansion and operational strategies on **Tier-3 markets** to maximize revenue growth.
- Optimize inventory and promotions around **high-performing product categories**.
- Scale the **medium-sized outlet model** for future store planning.
- Prioritize **outlet and location strategy** over minor product-level adjustments.
- Enhance future analysis using pricing and customer behavior data for deeper insights.

THANK YOU
